Reporting Set Updates

Interface within the System Configuration module where signed Fintecor reporting set packages are previewed and imported. The package is checked and previewed first; nothing changes until the plan is confirmed.

Package Selection

Choose .fcpkg package: Opens a file picker for the package supplied by Fintecor. Accepts `.fcpkg` and `.zip`. The preview runs automatically once a file is selected.
Re-check: Re-runs the preview for the selected package without importing anything.
