System Logs & Revision History

Context: Visual representation of system activity surfaced through the notification interface and execution status indicators.

- **Key Components & Elements:**
  - **Activity & Audit Stream:** Displays recorded events including configuration changes, user logins, and system operations.
  - **Background Job Status:** Shows in-progress indicators and status updates for asynchronous background processes and scheduled tasks.
  - **Notification Center Interface:** Illustrates how server-side logs and operational events are presented within the application UI.
  - *Most system logs are kept server side not UI side.*

Revision #7
