User Access & Role-Based Permission

There are two roles possible, Admin and User.

Context: Interface for provisioning new user accounts and assigning permissions within the system.

- **Key Components & Elements:**
  - **User Detail Input Fields:** Captures essential user profile information, including username, full name, email address, phone number, and account password.
  - **Role Assignment Controls:** Configures access privileges with options to assign either **Admin** or **User** system roles.
  - **Security & Authentication Options:** Includes a toggle/checkbox option to enforce Google Authenticator (2FA) multi-factor authentication upon login.
